# Pay by URL

The Payment URL functionality allows you to provide a link to your customers (e.g. in an email invoice, WhatsApp message, SMS, QR code, etc.) which then takes the customer to a webpage where they can securely make the payment with their preferred payment method, whenever convenient for them.

This is especially useful in scenarios where goods get paid after delivery, where no goods get shipped at all (e.g. final payment for trips that have been booked months ago) or for the payment of monthly bills. With the Payment URL functionality enabled for your store, you will find an option to select Generate Payment URL under the Order Information.

If the checkbox is selected, the Card section (Credit Card, Direct Debit) and Recurring sections will be hidden. You can then complete the required information for the payment URL and continue the transaction as usual.

The generated URL will be shown on the Transaction Result page where it can be selected (copied) to provide it to the customer. The URL can also be copied from the Order Details page at a later point.
